Pafnuty Chebyshev: "Let's assume that a person[ality] has the shape of a ball."

Pafnuty Chebyshev (1821 – 1894) visited Paris to give a talk entitled "Optimal cutting fabric". It brought together almost all the Parisian tailors in the big lecture hall. App. five people left after his first phrase sounds like "Let's assume that a person has the shape of a ball."

Putilov AA. *Geometry of Individual Variation in Personality and Sleep-Wake Adaptability*. (Series: Psychology Research Progress). Nova Science Pub Inc. New York. 2010. 270 p.

Initially proposed 3-D look at the personality traits structure

Initially it has been proposed that the structure of Russian personality trait terms requires no more than three spatial dimensions and that they are equal in length (Putilov, 2010).

Figure from:
Putilov AA. Geometry of Individual Variation in Personality and Sleep-Wake Adaptability. (Series: Psychology Research Progress). Nova Science Pub Inc, New York, 2010, 270 p.

...but it turns out that these three spatial dimensions are unequal in length (Putilov, 2016, 2018).

The present study was aimed on

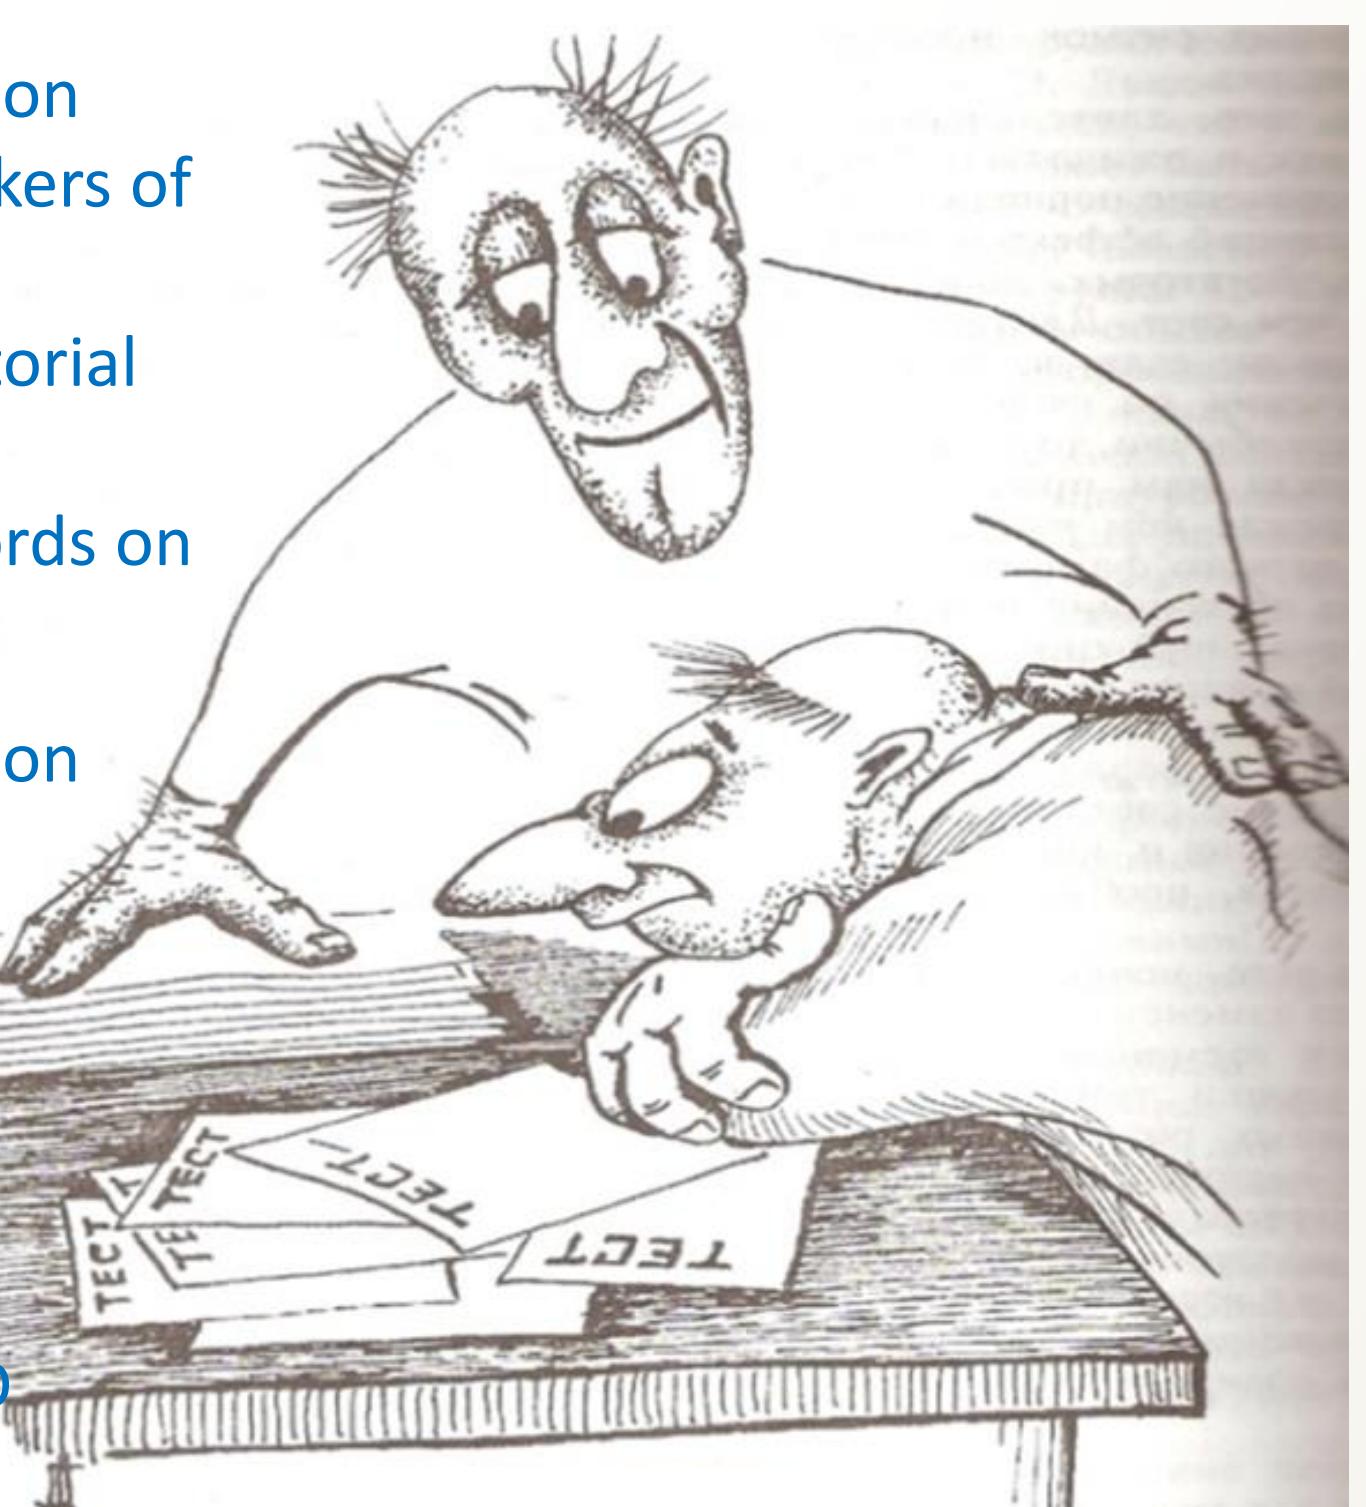

1) selection of the words-markers of broad personality traits representing six largest factorial dimensions and

2) spatial location of those words on

The present study was aimed on

- 1) selection of the words-
 markers of broad
 personality traits
 representing six largest
 factorial dimensions and
- 2) spatial location of these
 words on the surface of 3-D

Table. Overlap of 48 terms with terms from the six-component solution (De Raad et al., 2014)

In the previous studies, Russian speaking respondents used the lists of 496 and 296 personality-relevant nouns for judging 1242 and 447 peoples, respectively, and their judgments were used for reducing these lists to 172 nouns that can be evenly written

By applying factor analysis with varimax rotation to the responses of 1023 volunteers to the list of 172 personality-relevant nouns, 36 words-markers of six broad personality traits were selected from nouns with the highest loadings on six rotated factors, and these words were visualized by their mapping on the surface of 3-D structural representation of Russian personality lexicon.
